

Dragonfly

The original floating swimming pool cleaner

Dragonfly Super Skimmer is proving to be a big hit with both pool owners and pool maintenance professionals. There is no pool cleaner as effective available on the market.

The concept behind the creation of the Dragonfly Super Skimmer was the direct result of pool owners being forced to watch leaves, pollen, dust, etc floating on the surface and having to be hand netted to stop it from contaminating the pool. Dragonfly put an end to this problem along with a number of less obvious problems.

Dragonfly, an innovative simple and economical method for keeping the surface of the swimming pool clean. It is able to do this because Dragonfly is a floating pool cleaner that removes most of the dirt before it sinks and contaminates the water.

The Dragonfly cleans dirt, leaves fats and bacteria from the surface by utilising the natural surface tension of the water. By running the Dragonfly three times a day as part of the normal filter cycle nearly all contaminants that land on the water are removed directly to the filtration system.

Pool owners gain control over dust, leaves, pollen, fats etc promoting healthier and crystal clear water.

The top 150mm of water in swimming pools possess the greatest risk to bather health. In this area, where water is warmest and due to bather activity, sunlight and other atmospheric factors, the pools disinfectant capability is at its weakest.

Dragonfly reduces health risks because it removes water from the surface along with bacteria allergy promoting pollens, industrial fallout and other pathogens. It sends this water directly through the filter from where it is returned into deeper areas of the pool where disinfectants are more effective.

Removes annoying insects floating on the water - before going for a swim, just turn the Dragonfly on for a little while.

Increase available chlorine, save money by reducing the amount of plant and insect based matter suspended in the water.

Take advantage of rainfall because Dragonfly floats it will continue to work with optimal efficiency no matter how high the water level.

In times of water shortage when the pool can't be topped up Dragonfly can be set up to work when the built in static skimmer is high and dry.

Features

Constructed from UV resistant Luran/S plastic and polypropylene. It is able to withstand the rigors of sunlight, chlorine, salt acids, alkalies and other pool chemicals.

Dragonfly has one moving part that is highly unlikely to ever wear out.

Removes bacteria and allergens from the surface of the water

Suitable for inground and aboveground pools.

Stops dirt before it has to be swept up from the bottom.

Benefits

- Easy to install.
- 4 year warranty.
- Requires no maintenance.
- Dragonfly will not restrict water supply to the pump.
- Can be used with large inline leaf canisters reducing time spent emptying leaf baskets.
- No damaging thumping vibrations typical of many automatic pool cleaners.
- Stops dirt dead in its tracks before the pool gets contaminated.
- Easily replaces faulty static skimmer boxes.
- Great in balance tanks where water levels vary greatly.
- Can be set up to work simultaneously with pool floor cleaners in most instances.
- Ornamental ponds will never look cleaner because Dragonfly keeps out most dust and leaves.
- Enjoy the shade of trees near the pool without the work.
